Good Morning:

I have been a resident of Lakeview for the past 21 years and of Mississauga for over 47 years. My children were raised here and like me, spent many enjoyable hours growing up, hiking through the areas which the Ford government and his friends now wish to destroy. Mississauga was late to the table but your recent council meetings and opposition to this horrendous and unnecessary project which will wreak havoc on the environment, our wetlands, and basic enjoyment for our children and thiers, for generations to come is most welcome. Opposition is finally growing but we cannot stop the momentum now. We must come together to protect this region and raise our concerns consistently until it is stopped. The whole project is a travesty. During this pandemic, we have seen how people have been drawn to rural areas for respite.

We need them close at hand for our mental well being. There is no turning back once the concrete is poured. Please speak for those who can't - or are unaware (which is unfortunately a large

section of the population as this project and many others have been kept quiet for too long). Now there is interest like never before.

This highway, if allowed, will further harm our health through air pollution. It will cost the taxpayers \$6 billion at a time when we don't know how the costs from the pandemic alone, will affect us. It will cross 85 rivers and destroy 400 acres of our Greenbelt. Urban sprawl is already a nightmare. This highway will only increase these issues, along with greenhouse gas emissions. We know we have a climate emergency already.....!!! This will be a disaster in so many ways. Is it worth it to save 30 seconds in travel time. We know that more and more people will be working from home. Please, oppose Highway 413 and support a full Federal Environmental Assessment. Work cannot and must not begin until we know all the facts about the impact that building this highway will have.

Thank you for taking time to read this.

Regards,
Janine Le Forestier
