

**Appendix I – Enterprise Architecture Domain Definitions**

Enterprise Architecture Foundation	Foundational domain for the management and maintenance of EA, which also covers the roles and responsibilities for the architecture descriptions, requirements, and solutions/programs in a multi-user environment that is (technically) integrated with other systems
Enterprise Architecture Development and Analysis	Development and analysis of architecture on various levels to identify threats and improvement opportunities that will be considered in the Solution Portfolio
Enterprise Architecture Usage	Management of strategic alignment or managing the solution portfolio/development.
Enterprise Architecture Transparency	Reporting and monitoring of the architecture related activities
Enterprise Architecture Methodology and Research	Monitoring of frameworks, industry and technology trends, to identify external developments that might impact the enterprise architecture
