It's going to get colder tonight!

#DYK salt only melts ice & snow at temps above -10C. When it's too cold for salt to work, try alternatives like sand, grit, non-clumping kitty litter or mag chloride. For more winter tips, visit bddy.me/2SqUCZo

DYK: Road salt works well for melting ice, but its impact on the environment lasts long after winter. It mixes with water from melting snow or rain & gets into rivers, lakes & soil. Overtime it harms our environment, wildlife & quality of our drinking water. #LessSalty

@regionofpeel

Apply a small amount of salt across your driveway before wet snow and freezing temps to help prevent ice and snow from sticking and make it easier to clear. Salt less, stay safe and help protect the environment. bddy.me/2tCol7w #LessSalty

Region of Peel

@regionofpeel

Significant snowfall amounts are expected overnight through Saturday evening-10 to 15 cm! Avoid ice build-up by clearing snow from driveways & walkways as soon as possible - Then use salt only in areas needed for safety. More tips at bddy.me/30vh9X4 #LessSalty

Road salt works well for melting ice, but its impact on the environment lasts long after winter.

We maintain and keep our parking lots and walkways safe while using salt wisely. Remember, salt doesn't need to be seen to be working.

Do your part to keep safe in wintry conditions:

- Wear proper winter footwear with good treads
 - You'll reduce your risk of slipping and falling;
 - And save your favourite shoes from water and salt damage
- Walk carefully and pay attention to your footing
- Try to keep your hands free of bags to keep your balance
